

# AIRBRIDGE

- > Liferaft Systems Australia (LSA) Airbridge provides a stable and rigid walkway and working platform in both soft terrain and shallow water situations.
- > Inflated, the Airbridge is 5 metres long and 1.4 metres wide.
- > Easily portable with a packed weight of approximately 25 kg.
- > Inflation can be achieved from a variety of compressed gas sources without the need for special regulators or pressure reducing devices.
- > Constructed with two separate air compartments to ensure that the unit will remain operational if either the bed or the pontoons are damaged during use.
- > Unique pontoon design offers enhanced stability on water. With the bed side down, the Airbridge provides containment for transportation of work equipment or injured persons.

- > Quality fittings allow for multiple Airbridges to be configured in many different ways.
- > Extra fittings can be added to tailor the Airbridge to suit the end user's individual needs.
- > Manufactured from advanced polyurethane and hypalon coated fabrics in accordance with LSA's ISO9001:2008 Quality Management System.
